

IN THE CLAIMS:

Please amend claims 1-5, as indicated in the complete listing of claims provided below.

1. (currently amended) A device that is at least capable to:  
send a request to a host computer for a web page, the web page including graphics  
and text;  
receive enables a user to view contents of an Internet image sent said device as a  
compressed raster image, the raster image being translated at the host  
computer from the web page including the graphics and the text;  
such that the device has the ability to decompress the compressed raster image; and  
selectively display a portion of the image under exclusive control of the device  
according to user input.
2. (currently amended) A translator software that is at least capable to:  
takes take, in response to a request from a remote device, a web page containing  
Internet or World Wide Web information that is to be displayed in a browser  
window, said information including graphics and text; such that:  
it translates translate the web page including said information to a raster image;  
it compresses compress the image; and  
sends it send the compressed image to a the remote location device for display;  
wherein the image is larger than a display area of the remote device available for  
displaying the web page.

3. (currently amended) A device as claimed in Claim 1, ~~such that~~ wherein the device is at least further capable to:  
~~it enables receive a user input~~ to point and click on a specific location of ~~an the~~ image being displayed;  
~~the device has the ability to send a message about the user input received on the~~ location back to ~~a the~~ host computer;  
~~receive the host computer may refresh a refreshed the image from the host computer~~ in response to the user input; and  
display the refreshed image ~~send it back to the device to be displayed.~~
4. (currently amended) A device as claimed in Claim 1, ~~such that~~ wherein said device at least allows ~~the a~~ user to scroll through the image under exclusive control of said device.
5. (currently amended) A device as claimed in Claim 1, ~~such that is~~ wherein said device is at least further capable to:  
receive ~~allows the user to input of~~ text and numbers; ~~which can then be sent~~  
send the user input of text and numbers to a the host computer; ~~and, which then sends~~  
receive a refreshed image back to the device.
6. (withdrawn) A method implemented on a server to serve documents, the method comprising:  
receiving at the server from a remote device a request for a document, the document including graphics and text;

rendering, at the server, into an image the document including the graphics and the text; and  
sending, from the server to the remote device, the image in a compressed format in response to the request;  
wherein the image is larger than a display area of the remote device available for displaying the document.

7. (withdrawn) The method of claim 6, further comprising:  
dividing the image into a plurality of sections for sending from the server to the remote device.
8. (withdrawn) The method of claim 6, further comprising:  
receiving at the server from the remote device a message indicating a user input received by the remote device at a location on the image displayed on the remote device; and  
applying at the server the user input to a location on the document corresponding to the location on the image in response to the message.
9. (withdrawn) The method of claim 8, wherein the user input comprises one of:  
a selection; and  
a string of characters.
10. (withdrawn) The method of claim 8, wherein the user input comprises a selection at the location on the image; and, the method further comprises:  
determining whether or not the location on the document accepts text input; and

sending from the server to the remote device a message to accept text input in response to a determination that the location on the document accepts text input.

11. (withdrawn) A method implemented on a portable device to access remote documents, the method comprising:  
sending from the device to a remote server a request for a document, the document including graphics and text;  
receiving at the device from the remote server an image in a compressed format, the image being rendered at the remote server from the document including the graphics and the text;  
storing the image on the device; and  
selectively displaying a portion of the image on a display of the device according to the image stored on the device.
12. (withdrawn) The method of claim 11, wherein said selectively displaying comprises: scrolling the image on the display of the device.
13. (withdrawn) The method of claim 11, further comprising:  
determining a portion of the image to be displayed on the device;  
decompressing the portion of the image for display on the device; and  
automatically decompressing a plurality of portions of the image after the portion of the image is decompressed.
14. (withdrawn) The method of claim 11, further comprising:

receiving at the device a user input at a location on the image displayed on the device;  
and  
sending from the device to the remote server a message indicating the user input for  
the remote server to apply the user input to a location on the document  
corresponding to the location on the image.

15. (withdrawn) The method of claim 14, wherein the user input comprises one of:  
a selection; and  
a string of characters.
16. (withdrawn) A server to serve documents through a communication network, the  
server comprising:  
means for receiving from a remote device a request for a document, the document  
including graphics and text;  
means for rendering into an image the document including the graphics and the text;  
and  
means for sending to the remote device the image in a compressed format in response  
to the request;  
wherein the image is larger than a display area of the remote device available for  
displaying the document.
17. (withdrawn) The server of claim 16, further comprising:  
means for dividing the image into a plurality of sections for sending from the server  
to the remote device.

18. (withdrawn) The server of claim 16, further comprising:  
means for receiving from the remote device a message indicating a user input  
received by the remote device at a location on the image displayed on the  
remote device; and  
means for applying the user input to a location on the document corresponding to the  
location on the image in response to the message.
19. (withdrawn) The server of claim 18, wherein the user input comprises one of:  
a selection; and  
a string of characters.
20. (withdrawn) The server of claim 18, wherein the user input comprises a selection at  
the location on the image; and, the server further comprises:  
means for determining whether or not the location on the document accepts text  
input; and  
means for sending to the remote device a message to accept text input in response to a  
determination that the location on the document accepts text input.
21. (withdrawn) A portable device to access remote documents through a communication  
network, the device comprising:  
means for sending to a remote server a request for a document, the document  
including graphics and text;

means for receiving from the remote server an image in a compressed format, the image being rendered at the remote server from the document including the graphics and the text;

means for storing the image on the device; and

means for selectively displaying a portion of the image on a display of the device according to the image stored on the device.

22. (withdrawn) The device of claim 21, wherein said means for selectively displaying comprises:

means for scrolling the image on the display of the device.

23. (withdrawn) The device of claim 21, further comprising:

means for determining a portion of the image to be displayed on the device;

means for decompressing the portion of the image for display on the device; and

means for automatically decompressing a plurality of portions of the image after the portion of the image is decompressed.

24. (withdrawn) The device of claim 21, further comprising:

means for receiving a user input at a location on the image displayed on the device;

and

means for sending from the device to the remote server a message indicating the user input for the remote server to apply the user input to a location on the document corresponding to the location on the image.

25. (withdrawn) The device of claim 24, wherein the user input comprises one of:

a selection; and  
a string of characters.

26. (withdrawn) A machine readable medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method implemented on a server to serve documents, the method comprising:
- receiving at the server from a remote device a request for a document, the document including graphics and text;
- rendering, at the server, into an image the document including the graphics and the text; and
- sending, from the server to the remote device, the image in a compressed format in response to the request;
- wherein the image is larger than a display area of the remote device available for displaying the document.
27. (withdrawn) The medium of claim 26, wherein the method further comprises:
- dividing the image into a plurality of sections for sending from the server to the remote device.
28. (withdrawn) The medium of claim 26, wherein the method further comprises:
- receiving at the server from the remote device a message indicating a user input received by the remote device at a location on the image displayed on the remote device; and

applying at the server the user input to a location on the document corresponding to the location on the image in response to the message.

29. (withdrawn) The medium of claim 28, wherein the user input comprises one of:  
a selection; and  
a string of characters.
30. (withdrawn) The medium of claim 28, wherein the user input comprises a selection at the location on the image; and, the method further comprises:  
determining whether or not the location on the document accepts text input; and  
sending from the server to the remote device a message to accept text input in response to a determination that the location on the document accepts text input.
31. (withdrawn) A machine readable medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method implemented on a portable device to access remote documents, the method comprising:  
sending from the device to a remote server a request for a document, the document including graphics and text;  
receiving at the device from the remote server an image in a compressed format, the image being rendered at the remote server from the document including the graphics and the text;  
storing the image on the device; and

selectively displaying a portion of the image on a display of the device according to the image stored on the device.

32. (withdrawn) The medium of claim 31, wherein said selectively displaying comprises: scrolling the image on the display of the device.
33. (withdrawn) The medium of claim 31, wherein the method further comprises: determining a portion of the image to be displayed on the device; decompressing the portion of the image for display on the device; and automatically decompressing a plurality of portions of the image after the portion of the image is decompressed.
34. (withdrawn) The medium of claim 31, wherein the method further comprises: receiving at the device a user input at a location on the image displayed on the device; and sending from the device to the remote server a message indicating the user input for the remote server to apply the user input to a location on the document corresponding to the location on the image.
35. (withdrawn) The medium of claim 34, wherein the user input comprises one of: a selection; and a string of characters.
